

Sand Slime

Included: Sand with baking soda, glue, slime activator

What you'll need: bowl, container or bag for your slime

Step 1: Place all of the glue in a bowl. Add a little bit of the sand and stir until combined. Keep adding sand a little bit at a time until completely combined. Do NOT continue to the next step until the sand is fully mixed into the glue.

Step 2: Add a very small amount of slime activator- be careful, it's gooey and can come out in a glob. Stir until all of the activator is incorporated. If it still looks very sticky, add a tiny bit more. Don't add too much because it'll turn too firm.

Step 3: Once it starts to look more like slime (may look slightly sticky, but that's ok), start kneading the slime. It will start out sticky at first, but keep kneading for quite a while. If it's still sticky after about 3-5 minutes, add a tiny bit more activator.

Step 4: After you have the right consistency, store the slime in a baggie or container so it doesn't dry out.
